

## Environmental Policy

Goodline is in the business of steel fabrication, construction and maintenance. It undertakes a range of work procedures, the locations of which are sometimes in sensitive environments. The nature of the company's activities may lead to the disturbance of both physical and human environments, within and outside the project site.

It is the policy of Goodline to control these effects and to ensure that the requirements of the projects specifications and applicable legislation, regulations and other policy requirements are met as a minimum, through the implementation of an Environmental Management System.

Notwithstanding that the requirements of legislation shall be met, Goodline has accepted the challenge and is committed to continually improving the way in which it conducts its activities and the outcomes of these activities, including the environment. It is a requirement of the company that environmental objectives shall be set for all projects and plant workshops. These objectives shall be reviewed regularly to address the environmental requirements and concerns of client companies as well as the community and as improved levels of performance are achieved, goals are set for further improvement.

This policy statement and its objectives are to be displayed in a prominent position in all Goodline site and project offices.

These displays and publications serve to demonstrate to our clients, colleagues and the public our commitment to achieving our objectives and to remind us of our responsibility to the environment.

**John Kennedy**
